PROFESSIONAL SUMMARY

Full-stack developer with about three years of experience building web applications with React.js, Node.js, Express.js and MongoDB. I specialise in enterprise dashboards and internal business systems: multi-role access control, approval workflows, KYC and loan processing, and banking API integrations. Currently the sole developer of a CRM dashboard and a connected bank loan-processing dashboard, responsible for data modelling, APIs, frontend, Docker-based production deployment and server hardening in a banking environment. Comfortable owning a feature end to end, from database design to a working, deployed UI.

TECHNICAL SKILLS

Frontend: React.js, Vite, JavaScript (ES6+), TanStack Query, Zustand, Redux, AG Grid, Tailwind CSS, SCSS, HTML5, CSS3
Backend: Node.js, Express.js, REST API development, JWT authentication, role-based access control (RBAC), Socket.IO, Redis
Database: MongoDB, Mongoose, aggregation pipelines, indexing, SQL
DevOps & Deployment: Docker, Nginx, Apache, PM2, Ubuntu/Linux, GitHub Actions (CI/CD), DigitalOcean, Cloudflare
Integrations: Banking and loan APIs, Rocket.Chat, Firebase Cloud Messaging, Baato Maps API, third-party REST APIs
Security: CIS-benchmark hardening (MongoDB, Nginx), secure server-to-server communication, VAPT preparation
Tools: Git, GitHub, Postman

PROFESSIONAL EXPERIENCE

Software Developer — Dv Excellus / Kheti
June 2024 – Present

Sole developer of the Kheti CRM/admin dashboard and the connected bank loan-processing dashboard

Architecture & Workflows

- Own both systems end to end: MongoDB data models, Express REST APIs, React (Vite, TanStack Query) frontends, deployment and ongoing maintenance.
- Implemented JWT authentication and role-based access control for CRM roles (superadmin, admin, sales, branch) and bank roles (maker, checker, finalizer, branch admin).
- Designed a multi-order KYC and loan-processing model in which each farmer can hold several loan orders, each with its own KYC snapshot and an independent approval history.
- Built maker/checker/finalize approval workflows with reject and revert paths, including bulk actions and status-specific notifications on both dashboards.

System Integration

- Built cross-server integration between the CRM and bank dashboards: order transfer, status callbacks, re-sync of updated orders and shared notifications.
- Routed server-to-server traffic through a relay server to satisfy the bank's network restrictions.
- Integrated the bank's loan APIs (account validation, demand loan, disbursement, fund transfer) behind an internal gateway with request validation and idempotency safeguards.

Production Deployment & DevOps

- Deployed the bank dashboard to Ubuntu-based bank infrastructure using Docker with private container images, Nginx and an obfuscated production frontend.
- Set up a self-hosted GitHub Actions runner for automated build and deployment (CI/CD).
- Supported the bank's CIS-benchmark hardening of MongoDB and Nginx and prepared the application for VAPT; apply runtime security upgrades on production servers.
- Developed and maintain the public Kheti website; handle production maintenance, bug fixing and performance optimization across all three applications.

Frontend Developer — Splendour Group
Dec 2023 – June 2024

- Developed responsive UI components and implemented HTML, CSS and JavaScript best practices for clean, maintainable code.
- Maintained and updated existing web applications, and collaborated with designers and backend developers to deliver full-featured interfaces.

Freelance Full-Stack Developer — Self-Employed
2023 – Present (part-time)

- Build full-stack web applications with MongoDB, Express.js, React.js and Node.js for multiple clients, including websites and admin dashboards (see Selected Projects).

SELECTED PROJECTS

Kheti CRM Dashboard — **Full-Stack Developer**

React.js, Vite, TanStack Query, AG Grid, SCSS, Node.js, Express.js, MongoDB, Socket.IO, Rocket.Chat, Firebase Cloud Messaging

- Operations dashboard for an agriculture platform: farmer management, KYC capture, loan-order lists and bulk send-to-bank actions.
- Branch analytics module for loan recovery and NPL tracking, loan-classification movers and a watchlist.
- Field-visit and target monitoring: recovery, sales and other branch targets with calculated achievement, GPS check-in and road-distance calculation via the Baato Maps API.
- Real-time internal staff chat built with Socket.IO: one-to-one and group conversations, private file attachments with automatic expiry and Firebase push notifications, extended with a cross-server bridge so bank staff can message CRM staff.
- Integrated Rocket.Chat for communication between farmers and the CRM team.

Bank Loan-Processing Dashboard — **Full-Stack Developer**

React.js, Node.js, Express.js, MongoDB, Docker, Nginx — deployed on a commercial bank's own infrastructure

- Bank-facing dashboard for receiving, verifying and approving farmer loan orders submitted from the CRM, with per-order KYC views and bulk processing.
- Branch assignment of orders, with branch administrators uploading legal documents through authenticated, access-controlled file handling.
- Bank-filled regulatory and credit forms per order: MIS codes, Basel reporting, facility synopsis and banking-relationship details.
- Credit Appraisal Package PDF export in the bank's prescribed section order, including repayment-ability and DSCR calculations and Nepali-to-English value translation.

Kheti Website | kheti.farm — **Full-Stack Developer**

- Public website for the Kheti agriculture platform, developed and maintained alongside the dashboards.

AddGandaki — Government Project — **Frontend Developer**

React.js

- Frontend for a large-scale government platform with two dashboards serving farmers, vendors and government staff.
- Integrated real-time vegetable pricing and market data, and connected the UI to a budget-report generation system and backend APIs.

Client Websites & Admin Panels — **Full-Stack Developer**

React.js, Node.js, Express.js, MongoDB, Docker, Nginx

- **Euro Asia Employment Service** (euroasiaemploymentservice.com.np): company website and admin dashboard for job postings and contact management.
- **DvExcellus** (dvexcellus.com.np): company website with backend APIs, containerised with Docker and served through Nginx.
- **DigiMad** (digimad.org): responsive website for a social-impact organisation.
- **KisanCare** (kisancare.com.np): website for an agriculture consulting company, with dynamic content sections for advisory services.

OPEN-SOURCE CONTRIBUTION

Nepali Calendar React — published npm package | npmjs.com/package/@adhikarisaroj795/nepali-calendar-react

React.js, MIT license

- React calendar component supporting Bikram Sambat and Gregorian dates, with date conversion based on official calendar data.
- Customisable styling, accessibility support and localised Nepali number display; packaged and published independently to npm.

EDUCATION

Bachelor of Information Technology (BIT) — KIST College, Kathmandu — **2018 – 2024**

Higher Secondary Level (+2) — Balmiki Providence, Birtamode, Jhapa — **2016 – 2018**

LANGUAGES

English | Nepali | Hindi
